

RENCO ELECTRONICS, INC.

"Precisely the best coils and transformers"

September 19, 2006

Suppliers, Customers, and Associates

Subject: Prevention of Counterfeit Electronic Components

The proliferation of counterfeit coils and transformers throughout the marketplace is a growing problem and as such we are asking everybody to support the risk mitigation by following a few new guidelines. By complying with these actions, we believe additional front-end prevention actions will substantially reduce the risks of introducing counterfeit magnetic components.

Suppliers

Suppliers of materials must have traceability to the original equipment manufacturer (OEM) as identified on the Renco PO or bill of materials. The OEM certification must be maintained by our suppliers and made available by request by Renco Electronics. If any changes in manufacturing materials, processes or manufacturing location(s) are being considered, prior written approval must be submitted to our purchasing department before accepting any shipments.

Customers

Customers of Renco Electronics must be aware that there are distributors, suppliers, sales agents and even manufacturing companies that will misrepresent themselves and supply Renco Electronic's brand product(s). These products must be considered counterfeit and should never be utilized. If you purchased or intend to purchase Renco product(s) from any outside entity, always verify if they are an authorized distributor or agent. If you should ever doubt or be suspect of a particular component, please contact our director of quality at: quality@rencousa.com.

Thank you for your cooperation. The prevention of counterfeit electronic components is a serious matter and we, at Renco, appreciate your assistance.

Sincerely yours,
Edward W. Rensing
President
