

Renco Finds Treasure on the space coast

Speak with people any place in America where they love to live, work and play; among its many resources, you will find a strong network of professionals, skilled workers and state-of-the-art facilities of all types. Renco Electronics headquarters, located in Brevard County is contributing to the vitality of Florida's space coast.

Recently, Renco was awarded top honors as a supplier to Lockheed Martin, as one of the top coil and transformer manufacturers in North America. Renco has a fifty-year history of providing leading-edge design and support with a level of customer service which keeps customers coming back. "Receiving this honor speaks volumes to our guiding principles of offering the highest quality product and services to our customers", says Edward W. Rensing, President and CEO.

State-of-the-art design, manufacturing and distribution by caring professionals are our trademarks. We gauge this regularly by surveying our customers. Customer satisfaction rates are consistently above 96%. Renco has a long-standing commitment to improving quality throughout the organization. "It is the continuous efforts in the improvement process by Renco staff that have bolstered the company's

reputation for quality products and on-time delivery", according to Rensing.

Renco was also recognized as one of the, "best places to work", within our industry. Renco's new modern facility and headquarters in Rockledge certainly assisted in this decision. "Happier employees influence our customers buying experience", says Rensing.

Our 45,000 square-foot facility resides on 8.8 acres which includes a two acre lake, home to many indigenous birds and turtles as well as numerous fish. The modern manufacturing facility offers the latest technology and was created for:

✓ **Engineering, research and development.** Lead by our team of engineers and technicians, our prototype laboratory contains the latest

equipment which is used to design and develop *high-tech* components.

✓ **Dedicated small-order department.** Staffed with the company's veterans, this factory within a factory has the capability to produce any one of our products, from start to finish, circumventing the larger high-volume manufacturing cycle.

✓ **Florida based high-volume manufacturing.** We spared no expense in this area. High-speed, fully programmable, automated coil-winding machinery; robotic soldering;

vacuum varnish impregnation; computer-controlled inspection and test processes, just to name a few. We can produce 5,000 parts per line, per day, per product, within this facility.

✓ **Well-organized warehousing and distribution.** Organization here is the key to success. With custom-narrow aisled shelving, utilizing the maximum height of our building, along with electric *pick-and-place* vehicles, ensures quick and accurate delivery of parts and products to our manufacturing floor and customers. Our computer-controlled inventory and fully-secured warehouse keeps all inventory protected.

Renco's relocation from Long Island, New York to Florida's Space Coast has assisted us in positioning the company for the next generation and allows us to have a "happier, healthier" work group which makes for satisfied customers.
